Java

```
class Solution {
  public long countSubarrays(int[] nums, int minK, int maxK) {

  }
}
```

```
--------------------------------------------------------------------
```

JavaScript

```
/**
 * @param {number[]} nums
 * @param {number} minK
 * @param {number} maxK
 * @return {number}
 */
var countSubarrays = function(nums, minK, maxK) {

};
```

```
--------------------------------------------------------------------
```

TypeScript

```
function countSubarrays(nums: number[], minK: number, maxK: number): number {

};
```

```
--------------------------------------------------------------------
```

C++

```
class Solution {
public:
  long long countSubarrays(vector<int>& nums, int minK, int maxK) {

  }
};
```

C#

```
public class Solution {
  public long CountSubarrays(int[] nums, int minK, int maxK) {

  }
}
```

Kotlin

```
class Solution {
  fun countSubarrays(nums: IntArray, minK: Int, maxK: Int): Long {

  }
}
```

Go

```
func countSubarrays(nums []int, minK int, maxK int) int64 {
}
--------------------------------------------------------------------------------
```
